

Traditional - Qube - Cotswold

Dreaming of becoming a greenhouse owner?

There is nothing better than harvesting the fruits of your labour, which is quite literal when it comes to greenhouses. Your own home-grown tomatoes, cucumbers, chillies and herbs simply taste better than the ones you buy in a supermarket, and you can also be certain that they have not been sprayed with pesticides or shipped from across the world. Your harvest is your own – from farm to fork.

When choosing your greenhouse, it is a good idea to carefully consider what you want to use the greenhouse for and – bear in mind – we have never had a customer who wanted a smaller greenhouse than the one they purchased. There must be enough room for the greenhouse in your garden, but you can never have too much space inside your greenhouse.

Juliana Group is the company behind three of the most distinguished greenhouse brands – Halls, Juliana and Gabriel Ash. These ranges provide greenhouses ready to suit any garden and lifestyle. Manufactured in Denmark, England and China our

greenhouses are sold in more than twenty markets worldwide. This catalogue introduces you to Halls greenhouses, our proudly traditional English range which benefit from modern materials and design.

Halls greenhouses are divided into three product lines, Traditional, Qube and Cotswold and each has its strengths, special qualities and characteristics. Our wide product range certainly has something just for you, whether you are a novice or seasoned gardening enthusiast. You can find more inspiration at www.hallsgreenhouses.com.

We would also like to invite you to our Greenhouse Forum. At www.greenhouseforum.com you can find inspiration, advice and guidance for life with your greenhouse, and you can post questions to our experts. Read more on page 52. We hope you would like to join us.

Enjoy!

Halls Traditional

Halls Greenhouses was founded in the UK in 1934. Initially, the greenhouses were made of timber, but later Halls adopted the new material, aluminium, and the company became the first to mass-produce greenhouses for private customers. Hence, Halls Traditional is the essence of the famous English gardening tradition. The models have been copied over and over again, and it is not without reason, as the Halls Traditional greenhouses are of good quality at affordable prices, and you really get value for your money. More than eighty years of experience and product development do not fail, and we definitely recommend the original.

Most Halls Traditional are available in both silver aluminium or powder coated green. For most of

the models, you can choose traditional split horticultural glass or polycarbonate, and some models are available exclusively with toughened safety glass. The glass in all the greenhouses are 2 feet wide - a measurement that is in keeping with tradition and defines several of the product names.

The products have been developed over several years and the methods for fitting the glass, for example, varies from model to model. From the spring clips and retaining clips to glazing capping in the newer models. We continue to develop this classic range.

Halls Traditional is for those who prefer a traditional greenhouse in the garden, where simplicity and self-sufficiency are paramount. A safe choice and perfect for novice and experienced gardeners alike.

TRADITIONAL

Window

Smooth-running sliding door

The model is available with insulating polycarbonate glazing

Popular

This model has proved to be our bestseller over the years. It is a perfect beginner's greenhouse and well suited for gardens with limited space. The glass and polycarbonate glazing are easy to install with clips and rubber glazing gasket, and the greenhouse comes with a smooth-running sliding door and window for effective ventilation.

TRADITIONAL

The Magnum series has four windows

The greenhouse features exceptionally tall sides

Magnum has extra reinforcement

Double sliding door

Magnum

A perfect solution for gardeners seeking a spacious greenhouse. The double sliding door provides perfect access, and the generous eaves height ensures plenty of space for both you and your plants.

All three sizes have four windows to provide the ventilation needed. Magnum comes with either a silver aluminium or powder-coated green frame, and if you choose to buy 3 mm long-pane single sheets of toughened glass, you will get a particularly splendid greenhouse, reminiscent of the orangeries of the past.

Atrium

Halls Atrium is a very smart, elegant pavilion with plenty of space for growing vegetables or for use as an atelier. Your imagination is the only limit to how this pavilion can be used. The distinctive long-pane single-sheet glazing makes for a beautiful, elegant greenhouse, where the field of vision from the greenhouse is not interrupted by sectioned panes.

The pavilion is furnished with double sliding doors and three opening side windows for extra ventilation, so you will feel as if you are actually sitting outside in the garden, but with the added bonus of

being sheltered from the weather and surrounded by your plants.

Halls Atrium comes with 3 mm toughened glass in the sides and 6 mm polycarbonate glazing on the roof and is available in powder-coated green.

Enjoy every corner of your greenhouse

The Garden Room

The Halls Garden Room provides great value for money when it comes to overall size and innovative features.

Frame

The traditional greenhouse frame has been brought into the 21st Century and includes more bracing to help it cope with harsher weather. The roof pitch has been increased to provide more volume of air within the greenhouse, and also aid snow loading capacity. The completely redesigned ridge bar include a channel on top for decorative cresting, and gutters now offer a much improved water harvesting capacity to capture much more precious rainfall.

TRADITIONAL

		12'8"	12'8"	5'3"	9'1"				✓		✓	

TRADITIONAL

Toughened glass with capping

The Garden Room is supplied with 3 mm full length toughened glass; the best choice when it comes to glazing a greenhouse. Full length safety glass eliminates the normal overlap and can also better withstand high velocity impacts. If it does break, it breaks into small particles making it the ideal choice in a family oriented environment. The capping secures the glass along the full length of both sides of each pane making the greenhouse stronger in windy conditions. It also provides a superior finish, with the added bonus of being easier to clean.

Anti-capillary glass clips

The anti-capillary glass clips vastly improve rain water runoff into the gutters; they also minimise the possibility of the water ingress through capillary action making its way back inside the greenhouse. Also, due to the clever design, it minimises internal condensation drips by allowing condensation that builds up on the inside of the roof to freely drain down the pane of glass directly into the gutters.

Water harvesting gutter corner joint

The first of its kind; interior water harvesting component for greenhouses. This innovative design allows you to capture water on the inside of the greenhouse in two locations.

Roof vents

Four roof vents are supplied as standard to circulate and vent the huge volume of air contained within this large greenhouse.

Doors

The hanger style doors and innovative low threshold design eliminate the traditional stepping over or ducking to enter your greenhouse. Included as standard are industrial inspired door handles to ensure smooth operation.

TRADITIONAL

Halls Qube

Qube is a newly developed range of greenhouses that was launched in 2019. At the Juliana Group, we take pride in greenhouse design and development, and the goal of the Qube series has been to create a modern and simple design that also has several unique features. The square box section profiles that give the name to the greenhouses provide a unique strength despite the light design, where the glass almost “floats”. In this way, Qube is a sleek greenhouse that, with its light and timeless design, blends into the environment in which it is built. We believe that Qube is a modern classic that you can personalise and create your own unique outdoor space.

All Qube greenhouses are made of black powder-coated aluminium and come with toughened safety glass throughout, which ensures the streamlined look and gives the greenhouse strength while ensuring an uninterrupted view when you are in

the greenhouse. The glass is fitted with double sided tape and glazing capping, which sits on top of the glass and contributes to the sleek look. The greenhouses are constructed with a revolutionary door design on sliders, which provides a strong door that slides easily. You can choose between single and double sliding doors depending on the width of the greenhouse. Halls Qube is produced at our factory in Odense, Denmark.

Halls Qube is the perfect greenhouse for those who want a robust greenhouse, which also has a light and elegant look. The greenhouse will become a modern growing space in your garden, that can also be used as a space for relaxation. A strong choice in a beautiful frame.

On the following pages, you can read about the many special features and functions you get with a Halls Qube.

Halls Qube gives you

A streamlined greenhouse, with a light and timeless design which blends in with its surroundings. It has a simple appearance that can be subtle or make a statement, it all comes down to the décor and how it's used – a classic that you can personalise and where you can create your own unique outdoor space.

A solid space with our newly developed box section profiles, which ensures a durable greenhouse that can manage even extreme weather conditions such as storm and torrential rain. The unique box section profiles are constructed so they optimise the aluminium's strength. This means less aluminium is used for each profile, but the strength is the same as other more traditional profiles. Thus you get a strong and solid greenhouse with a light and elegant look.

A revolutionary sliding door design, gives you a strong door that slides easily. The door uses sliders

and is constructed to ensure that it doesn't jam or jump out of the rail. The construction also makes the door very strong and when closed it is flush with the greenhouse and contributes to the elegant finish.

The low threshold allows easy access and makes it easier to wheel in a small wheelbarrow or trolley.

QUBE

The glass is fitted using glazing capping, ensuring a beautiful finish. The capping is a neat alternative to clips, which damage the overall aesthetics and allows dirt to accumulate around them.

Wide gutters for large amounts of rain and ready for optional 40 mm downpipes. It is an advantage to be able to carry larger amounts of rainwater away, and for example collect it in a water butt and use it for watering. This is great for both the environment and saving money. The downpipes are not included with the greenhouse but can be purchased separately.

3 mm toughened glass offers increased safety and is less likely to be affected by footballs or stones thrown up by the lawnmower. If you are unlucky enough to break a pane it will shatter into small pieces thereby significantly reducing the chance of injury. The toughened glass is provided in full length panels which give the greenhouse a streamlined look and contributes to the airy feel.

The high-pitched roof allows snow to quickly slide off while creating a roomy interior with plenty of space to work.

There are many ways to set-up your greenhouse; from shelves to staging to louvres and automatic vent openers. Many of the accessories are integrated into the greenhouse profiles which enables you to maximise the space you have and adds an extra dimension without compromising the looks.

Halls Qube 5,1 m²

Qube

The timeless style of the Halls Qube is designed to match most garden and house types. It has been created with innovative new profiles which guarantee a durable and robust greenhouse but which, at the same time, have a simple and elegant look.

The Halls Qube can be your perfect hideaway, where you can read a book while the sun warms the greenhouse or it can be your own little garden laboratory where you can grow your own herbs, cucumber and beans, ready to cook up a storm.

Halls Cotswold

The Cotswolds is an area of outstanding natural beauty in south-west England. The hilly region is characterised by cosy small villages, ancient stone walls, winding roads and beautiful gardens. The Cotswold greenhouses are named after a number of villages in the area; Birdlip, Burford, Blockley, Bourton and Broadway.

The British garden tradition influenced the design of the Cotswold greenhouses and they carry a reputation for quality and value for money. Mixed with innovative solutions Cotswold offers you the absolute best tool for growing and for personal relaxation to fulfil your greenhouse dreams.

When the Cotswold greenhouses were designed in 2015, it was with the strong English greenhouse tradition in mind, and it evolved to a strong aluminium profile system that is tailored to the sometimes

harsh North European climate. For the greenhouses, a new revolutionary and patented Zero Threshold™ door system was developed, to completely avoid the traditional door threshold profile and thereby get completely free access to the greenhouse. The door sliding system also gives you a greenhouse door that does not jam, as is seen with many greenhouse sliding doors. Halls Cotswold greenhouses are manufactured at our factory in Cheltenham, Gloucestershire, England.

The Cotswold greenhouses are for gardeners who want a solid greenhouse with strong aluminium profiles based on the classic British model. The eaves height and the total height of the greenhouses provide a spacious place where there is room to unfold your many greenhouse plans for both vegetables, flowers and personal space.

COTSWOLD

Introducing The Cotswold Range Of Zero Threshold Greenhouses

Robust construction

The strong aluminium profiles and integral base speed up the construction process and ensures a long working life. All Cotswold greenhouses are covered by our 12 year frame guarantee.

Cotswold greenhouses have a classic appearance. Clean, modern aesthetics with no unsightly sliding door track. The strong tubular ridge bar gives a robust, more durable building and allows for optional cresting. The profiles have a T-slot, which allows numerous options to install shading, hanging baskets and other practical accessories.

All models feature extra-high eaves for more growing space and working comfort but are not too high to heat economically. The high eaves also allow an increased volume of air for an improved growing environment giving more room for you and your plants.

Zero Threshold™

All Cotswold greenhouses feature the revolutionary, patented, Zero Threshold™ sliding door system. Finally a greenhouse door system has been developed that ensures smooth, jam-free operation. The system also does away with the traditional threshold bar, meaning there is no possibility of tripping over. This gives perfect access and makes a Cotswold greenhouse ideal for wheelchair users and ensures wheelbarrow access and safety for

UK Patent No. 2 989 886 (E)

children. The much smoother opening and closing operation system also means lower maintenance than traditional greenhouses doors.

Frame and Colours

All five Cotswold models are available in three attractive frame finishes; aluminium, powder coated green and black. The quality of the powder coating has proven to last for decades, so there is no other maintenance than ordinary cleaning once or twice a year.

Glazing

When glazing your Cotswold greenhouse you can choose either 3 mm horticultural glass, 3 mm long pane toughened glass or 6 mm twin wall polycarbonate options. Horticultural is the classic greenhouse look with glass panes overlapping and fitted spring wire glazing clips. Long pane toughened glass gives you the cleanest and most beautiful look with no glass clips as the glass is fitted with glazing capping. Twin wall polycarbonate has insulating properties which is why it is primarily installed in greenhouses used exclusively for growing and propagating, as it is not transparent hence not as attractive.

COTSWOLD

Lockable doors and practical details

The Cotswold sliding doors all feature a superior door lock that locks with a simple push button action. A number of practical details can be seen around the greenhouses, including safety corner covers.

Large roof vents

During the summer months it is important to keep the growing area well ventilated. The large roof vents ensure that when the hot air rises it can flow out of the greenhouse.

Wide gutter system

80mm wide built-in gutters capture the most rainwater possible and are easy to keep clean. The 40mm downpipes are supplied as standard and are compatible with widely available plumbing parts. The gutter clip system increases precious rainwater capture, reduces greenhouse leaks and minimises

internal condensation drips. It is easy to install our water collecting system, which is an accessory available to all the Cotswold structures.

Assembly

The Cotswold range is easy to assemble. Clearly illustrated instructions are supplied and there are a number of videos online to support the installation process. Should the need arise, our customer service is ready to advise and help out.

The Halls Cotswold range is manufactured at our production facility in Cheltenham by British Craftsmen.

Lockable doors

Safety Corner Covers

Broadway

The Broadway brings the award winning Zero Threshold™ door system to the lean-to greenhouse sector. A lean-to greenhouse is a great choice for over-wintering plants because the sun will warm the wall during the day and that warmth will be released into the greenhouse at night, ensuring an ideal growing environment.

Toughened glass with capping

Greenhouseforum.com

 **JULIANA**

In 2010 Juliana Greenhouses started “The Greenhouse Forum”. The original purpose of the community was, and still is, to create a place where all greenhouse owners can come together and share their common interests. It is a digital way to have a “chat over the fence” or with family and friends and where you can exchange both tips and experiences about gardening and the use of your greenhouse.

For everyone who enjoys greenhouse gardening

Planting exciting things in the greenhouse can be an art, but luckily there are many skilled, knowledgeable and experienced greenhouse owners that share their tricks and secrets with others. The Greenhouse Forum is a comprehensive source of tips, tricks and

hacks, inspiration, guides, advice and guidance, and shared knowledge and experience. You can get a great deal out of the Greenhouse Forum even if you are a novice or an experienced greenhouse owner. Everyone with a passion for greenhouses is welcome to join the Greenhouse Forum – regardless of whether you are a greenhouse dreamer, a greenhouse novice, a greenhouse enthusiast or a greenhouse expert.

Inspiration, newsletter and professional feedback

You can use the Greenhouse Forum however you like. Use the website when you need an answer to a specific question about greenhouse growing, or if you need inspiration for ideas that can bring new and great experiences to the greenhouse. In the calendar you can follow month by month the seasonal tasks in the greenhouse. There are many articles and blog posts, that are written by professional journalists and garden enthusiasts, there is an abundance of greenhouse knowledge and

inspiration. If you cannot find the answer to your question, you can, in the forum ask questions that will be answered by different experts. When you sign up for the newsletter, we will let you know about new posts on the forum, you will receive invites to events and competitions and get exclusive discounts in our webshop. It is fantastic and free.

Enjoying life and home-grown tomatoes

The greenhouse is a fantastic space in the garden. Even in the winter months and early spring with just a little sun, the greenhouse is a lovely place to be. When the preparation in early spring starts the season, tiny seedlings that thrive and grow through the summer and when you can harvest your own crops and turn them into special taste experiences, then the greenhouse truly has improved your life and wellbeing.

We are firm believers in communities – be it family, where you give your children or grandchildren the joy of sowing, growing and harvesting or in the wider garden community or at the allotments where working with others is as rewarding when harvesting satisfaction as well as nourishing crops from greenhouse. Please join our happy community of greenhouse owners in the Juliana Greenhouse Forum.

Please enjoy!

Nikolaj Stærmosé

Owner of Juliana Group and happy greenhouse owner
