

Over 100 Years of Cedar Greenhouses

A whole concept for a Cedar Greenhouse...

Since 1921, Alton has been at the forefront of the Cedar greenhouse market. The iconic sloping sided Amateur greenhouse has led the market for decades and at the time of its introduction in the 50s it was at the cutting edge of greenhouse design. Since then, the Alton design team have been pooling their vast knowledge and experience, along with years of feedback from our customers in order to create a Cedar greenhouse fit for the 21st Century.

Designed and manufactured in the UK

Your Alton model is crafted in our own workshop in Staffordshire. Every piece of Cedar is machined in-house in our fully equipped workshop. Some of these machines have been reliably making Alton greenhouses for over 40 years. Other, more modern additions use CNC technology to give highly accurate results. Advances in machining and joinery technology have enabled for the first time a flat-packed greenhouse which actually takes no longer to assemble than the old system of awkward to handle fully glazed panels.

Here are four reasons why Alton models are even stronger...

More wood!

It sounds simple, but it is surprising how some greenhouses both aluminium or Cedar have become thinner over the years in order to save cost. The Alton models use thick glazing bars which are based on 44x 44mm timbers or 44x69mm in places. How do we do this and remain cost effective? When these models were being designed, we carefully studied the whole process from raw material and delivery and we discovered that a large part of the cost of the greenhouse was coming from double handling, storage and distribution costs mainly because the greenhouse was in large unwieldy fully glazed panels. By delivering the Alton models in a flat packed format massive efficiencies are made, which means that you get more for your money.

Bar Capping System

Most wooden Greenhouses have glass held in by a beading or a groove. The result of this can be that the glass 'rattles' in the frame. The Alton's newly developed bar capping system uses the toughened glass as an integral part of the overall strength of the greenhouse by gripping it tightly. When you feel the greenhouse, there is little or no movement in it and you can see that it is far stronger (and you don't get a rattling sound from the glass).

Mortice and Tenon Joints

The cleverly designed jointing system on the Alton has the duel benefit of making assembly straight forward and adding strength to the framework.

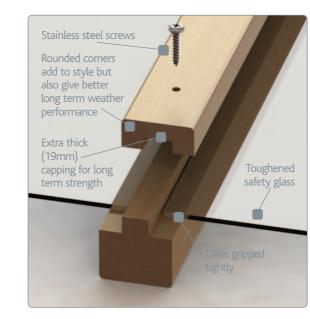

Toughened Safety Glass as standard

The 3mm Toughened safety glass that is supplied as standard with these models is in large panes which means that every pane is helping the rigidity of the overall structure. Toughened glass is 5-7 times stronger than standard horticultural glass and if you are unfortunate enough to break a pane, then it will disintegrate into hundreds of small pieces (like the side window of a car) - greatly reducing the chances of injury.

Bar capping system

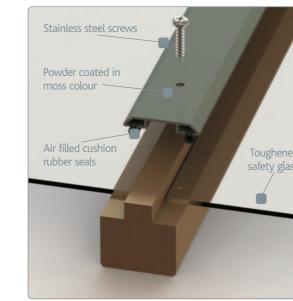

Cedar capping - standard sytem

Upgrade option Aluminium bar capping

With this new Aluminium bar capping system you really can have a virtually maintenance free Cedar greenhouse - and the stylish moss colour blends in perfectly with the cedar as it ages to the distinctive silvery colour.

6x8 Model shown with the Cedar capping system

The same 6x8 greenhouse upgraded to the aluminium capping system

Why Western Red Cedar is the best material for your greenhouse?

The following text is taken from the Grading Rules for Exported Canadian Western Red Cedar published by the Pacific Lumber Inspection Bureau, Bellevue, Washington, USA.

Western Red Cedar (Thuja plicata) 'The largest and finest of the cedars produced anywhere in the world, the western red cedar is famed for its extraordinary durability and resistance to decay.

Western red cedar is a distinct species, possessing all the desirable qualities of the other cedars, and additional benefits besides. It can be finished to a smooth, silky finish; it is free from pitch, it takes and holds paints and stains excellently, and has superior gluing properties. Its colour is extremely attractive, varying from almost pure white of the narrow sapwood to the light straw shade of dark reddish-brown of the heartwood.

The wood of Western red cedar has a very low coefficient of expansion, so that it does not shrink, swell or warp excessively, even when subjected to changing degrees of temperature and moisture.

It has prime insulating qualities and its pleasing aromatic odour is repellent to moths, insects and vermin. The wood is saturated to every fibre with a natural preservative oil which renders it virtually immune from decay and gives it extreme durability without artificial preservative treatment.'

In the 70s (when aluminium greenhouses first came out) there was a detailed 12 month investigation as to the different properties of Cedar v Aluminium and it was found that the Alton greenhouse produced heavier crops (12lb more tomatoes in the Alton greenhouse). There was also noticeably less leaf-curl in the Alton and less frequent watering was required. Not only that but it was also found that the Alton greenhouse used 18% less electricity to heat because the Cedar was less subject to temperature fluctuations.

Here's how clever design reduces maintenance by keeping water away from traditionally vulnerable areas on a greenhouse.

Glass overhang on roof - This simple design means that no wood is exposed to the roof water run-off.

Glass overlaps wood at the base - By sitting the glass onto the metal base, again no wood is exposed to the run-off water from the side of the greenhouse.

Guttering system - Protects the sides by removing roof water.

Metal base - The specially designed metal base keeps the Cedar framework off the ground where conditions are damp. Unlike some other Cedar greenhouses, where it can cost hundreds of pounds to add a base, the metal base on Alton Evolution greenhouses is included on every model.

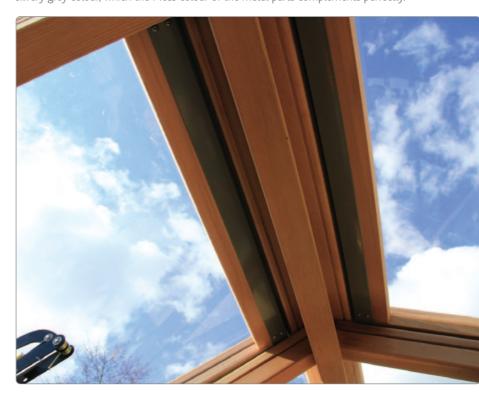

Bar capping system - If you wish to dramatically reduce the amount of Cedar that is exposed to the elements you can also upgrade to the aluminium bar capping system - please see back page.

Do I need to paint or treat my greenhouse?

Your Alton is made from 100% Western Red Cedar, The properties of which are described more eloquently than we could in the extract (left) from the Pacific Lumber inspection Bureau. This kind of Cedar is absolutely perfect for greenhouses as, although it readily absorbs moisture - even to the point of looking soaking wet, it also readily gives it up and dries quickly - yet never warps or moves - this makes it ideal for the conditions in a greenhouse. Add to this the fact that it is soaked full of naturally occurring preservative oils which make it virtually immune to rot. What's more, the pungent aroma that we find so pleasant is also a deterrent to may insects and pests.

Your Alton greenhouse will be supplied in completely natural cedar which will be factory treated in a clear wood preservative. There is no need for us to ruin this natural look, which highlights the broad variation of colours in the different pieces of the Cedar, by treating it with any artificial colour. The greenhouse will last a very long time - (customers often tell us about their 30 year old Alton greenhouse at shows) you don't need to retreat it for it to last - it will simply mellow in time to a silvery grey colour, which the Moss colour of the metal parts complements perfectly.

Of course if you wish to stain your greenhouse a certain colour, or if you wish to prevent the natural ageing effect that occurs in the first year or two as water soaks in and out of the Cedar wood – lifting the darker natural oils to the surface of the Cedar – then you can of course apply a coloured wood preservative if you wish – the fact that it is in a convenient flat pack format means that this is easy for you to do before you assemble it or before your fitter comes.

The treatment that we use to factory treat your Alton greenhouse is Alton Clear wood preservative, whilst not necessary from a rot prevention point of view, this does help the wood to age evenly to the attractive silvery colour which is distinctive to Cedar and reduces the prevalence of stains that can develop from the water soaking in and out of untreated wood.

The only maintenance that we really recommend is that you clean your greenhouse every year, and you'll no doubt do this anyway - to keep your glass nice and clean. Cleaning any dirt or even algae off once a year in Jan/Feb time will help your greenhouse last years and get you ready for the growing season.

Your greenhouse frame is guaranteed for 10 years against rot - you never have to treat the greenhouse for this - just leave it as it is and clean it once a year.

Other features of Alton models which will help prevent rot and therefore reduce maintenance:

Metal Base

This keeps the wood well away from the base where water can sit. Plus this unique design feature allows the glass to sit directly onto the metal base - which means that the side water is not running onto the wood, (which is a 'rot-spot' on other greenhouses) The Metal base

is included on every model, regardless of which kind of capping you choose.

Glass overlaps at eaves

This feature allows the water from the roof glass to run straight into the guttering. Again this means that no water is running over wood - removing another potentially vulnerable area.

Included on every model regardless of which kind of capping you choose.

Guttering

Takes the water away and allows you to collect it. Included on every model regardless of which kind of capping you choose.

Ridge Capping

Aluminium moss green ridge capping with ball finials either end is included on every model, even if cedar capping is

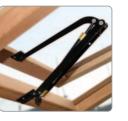

Aluminium Vent Hinge

Properly designed vent hinge.

Roof Vents

generous allocation of roof

model and every roof vent has an automatic opener included as standard. These clever devices work through heat expansion alone to open your room vents gradually as the temperature changes. Fully adjustable, they help you to create the perfect growing environment.

Louvres

Your new Alton model will also include one or more louvre windows. These work in tandem with your roof vents - as the automatic roof vents open and release the warm air, the greenhouse effectively sucks air in through the louvres. These can be positioned near the bottom or the top and on most models at the side of the greenhouse or at the rear. Supplied as manual opening as standard and you can add automatic louvre openers if you wish.

High Eaves

The eaves height of 5'7" on the Alton models is excellent and is as much as 18" higher than the lowest greenhouses on the market. The extra height gives you several advantages: There is more air in the greenhouse creating a better growing environment, you have more head room and a higher door, and you have plenty of room for a high level shelf in the greenhouse.

Easy access doors with no step

The unique Alton door system includes the low-profile door threshold. This popular feature means that you have no step at the door (many other greenhouses have a step at the door). Models of 8' wide and above have 4' wide access double doors which allow easy entrance for a wheelbarrow or wheelchair.

Extend to any length

If you are looking for a serious greenhouse then our EIGHT, TEN and TWELVE models should suit they're extendable to any length, so you can easily specify a 10x30 or any size that you wish (in 2' increments).

Internal Partition

On wider models, you can add an internal partition with sliding door. This enables you to create separate environments - for example for propagation in the spring, or frost free in the winter. You can position your partition anywhere except the joint of an extension.

A whole new concept of Cedar Greenhouse has evolved

make it virtually

Louvres

Safety Glass

Glazed throughout with toughened safety glass as standard. for strength and

safety. The large panes have a much more pleasant appearance than old fashioned overlapping panes.

Bar Capping

his model shows the ptional Aluminium bar capping system upgrade. With this system, there is

very little Cedar exposed to the elements.

Downpipe System

Includes a full length aluminium gutter each side and a downpipe each side. This not only keeps water

away from the side of the greenhouse, but also helps you to collect this vital resource.

Low Level Threshold

Specially designed aluminium door runner and low level threshold - gives you easy access with no step at the doorway. This 5ft wide and 6ft wide models have a single door and the wider models a generous 4ft wide double door.

Cold Frames

Why do we need to 'harden-off' plants?

When you raise plants in your greenhouse that you will later plant out in the garden you usually need to 'Harden-off' these plants rather than just taking them straight out of the greenhouse and planting them into the garden.

When you do plant straight out, you are shocking the plant as it will go suddenly from a warm atmosphere to a potentially cold and windy environment and this can shock the plants and literally stunt their growth.

If you have ever planted out a pumkin or some sweet peas for example only to see them stay the same size for 6 weeks after planting out and sometimes look sickly and even yellow, then this is a classic symptom of not being hardened off. Then suddenly in July, they will start growing- but too late to be any good in time.

The principle of hardening-off is that you gradually introduce the change in temperature to the plants over the course of about between 1-3 weeks. If you don't have a cold frame then you might remove from the propagator first, then out of the heated greenhouse into a cold greenhouse, then by the open door of the greenhouse, then outside in the day and inside at night etc until eventually the plants are outside day and night.

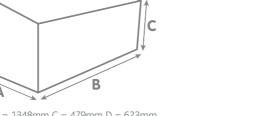

A cold frame makes this process far more easier. At first you can move your plants out of the greenhouse and into the cold frames with lids slightly open in the day and closed at night. Increase the ventilation gradually each day until eventually, you remove the lids completely. Remember to cover up the cold frame if the weather turns particularly colder or even frosty (use fleece as well if you like). Hardening-off is not just for non-hardy plants such as Pumkins or courgettes it is also important for hardy plants such as leeks or cabbages. Hardening-off actually thickens the leaves both in structure and wax level. If your greenhouse or original environment is particularly hot then you should harden-

off for longer and hardy plants will adapt quicker than frost sensitive ones (and, once hardened-off, these are Toughened glass still of course, frost sensitive).

frame provide that bit of shelter and warmth.

ALTON

Cedar Greenhouses

These Alton Evolution cold frames are made from the same thick and sturdy cedar profiles as the

hinged lids you can open these in a variety of ways including two different heights with the inbuilt

cedar props or you can keep them in the closed position but slide them across. At the final stage of

hardening off, you can remove the lids completely by simply sliding off, then the walls of the cold

Evolution range of greenhouses, complete with mortice and tennon joints. Complete with sliding and

Flexible lid system (hinged, sliding and removable) gives you many different ventilation

Bar capping options

The Evolution cold frame comes as a choice of two models – one with cedar capping to retain the glass and one with Aluminium capping. If you want to retain the natural timber look of your cold frame then you can stick with the cedar capping, however if you want to go for more maintenance free, then you can choose the Aluminium capping system. Powder coated in the Moss colour, this is designed to blend in perfectly with the cedar both when new and later when the cedar weathers to its natural silvery colour. If

Above shown with aluminium capping.

you intend to add the Cedar panel upgrade kit, then you will need to use the cedar capping kit.

4x2 Cold frame with Cedar capping £599

4x2 Cold Frame with Aluminium capping £649

Optional boarding kit

You can also add the cedar panelling kit for your cold frame, this consists of a full set of boards for all around the cold frame, all made from quality western red cedar. They can give a cosier area for the plants as the wood insulates, as well as having an attractive appearance. They will, of course, reduce light to your plants. Luckily, when you add a boarding kit, it is fully flexible. You can just put some please). Full boarded - see opposite page. of the boards in and leave

Shown with boards fitted to rear and sides (you can change panels with glass as you

some sections with just glass in (see right) or you can remove the boards and just have all glass. The way that this works in practice is that the capping holds the glass in and also holds the boards in in a similar way (so to change to boards you need to remove the glass and insert the boards) which is done fairly easily by simply unscrewing the capping and swapping over.

Side panels kit (full set) £249

Alton models come with a Cedar capping system to retain the glass. You can upgrade this to an aluminium system which is coated in an attractive powdercoated Moss colour. This makes your greenhouse virtually maintenance free.

This new four slat staging is ideal for this model. At 25" wide it provides an ideal work bench for one side of the greenhouse. The powder coated finish in the moss colour blends perfectly with the natural wood. For the ideal set-up add a full length of this plus a high level shelf - which leaves the other side of the greenhouse free for tomatoes etc.

EVOLUTION FOUR-LT

4'4" Deep (1330mm)

• High eaves • Toughened glass • Cedar bar capping • Guttering & Downpipes

· Auto-vents · Ground level door threshold · Louvres

Specification

- High eaves (5'7") for more space
- Extremely strong cedar framework
- Toughened safety glass & screw in bar capping as standard
- Sliding door with low level threshold
- · Aluminium gutter plus downpipes
- Auto-vents included (see table)
- 10 year framework guarantee

Victorian Greenhouses

Add a real centrepiece to your garden with an Alton Victorian...

The Alton Victorian range is a superb new range which cleverly blends the benefits of modern design with a distinctly Victorian image. You can choose from three styles – Glass to ground, half boarded or low wall versions. Built to last, these impressive structures will make a real centrepiece in your garden.

- Uses far thicker wood for example all the roof is 3x2 (44x69mm).
- 45 degree pitch to roof gives Victorian style and more height.
- · Hinged door with low threshold.
- · Victorian style cast aluminium spandrels, at ridge and eaves. (moss colour).
- All the usual Alton features as described earlier in this brochure Including the option to upgrade to aluminium capping system.
- Victorian style gutter.
- · Cast aluminium ridge end cap with Alton logo.
- Cast finials as standard.
- · Optional cast aluminium cresting (moss finish).
- Aluminium ridge cover cap on all models as standard (even with cedar capping).
- Available in three widths 6ft, 8ft, 10ft and two depths 7ft and 9ft any length.
- Available as half boarded (HB), glass to ground (GG) or low wall (LW) models.
- Supplied flat packed for self-assembly (ask your local agent about fitting services).
- Good ventilation included as standard automatic roof vents and louvres.

Can you assemble the greenhouse for me?

All Alton greenhouses are sold on a 'self-assembly' basis, and will be delivered in a flat packed kit format. However, we do recommend that you engage an experienced greenhouse fitter to assemble the greenhouse for you. Your local Agent will be able to arrange this for you.

You don't need any joinery skills to assemble an Alton greenhouse. All the jointing and all the cutting is done in the factory so its just a question of slotting together and screwing.

Delivery times

Your greenhouse will be hand made to order and delivery times vary throughout the year.

Delivery costs

Mainland UK **FREE** delivery, except postcodes AB, DD, IV, KW, PH and TR +£100. For off-shore, we can put the whole greenhouse onto an 'export pallet' and deliver to a

mainland address for a cost of £250. Any shortages can only be sent to mainland address. Accessories ordered alone will attract a carriage charge of £4.95.

Guarantee

E&O E.

Your Alton greenhouse comes with a free 10 year frame guarantee. This covers the cedar framework against faulty manufacture. Moving parts are guaranteed for 12 months. Exclusions include: glazing, wind damage, Labour, and accidental damage. Alton greenhouses are delivered in a totally natural cedar colour but we do factory treat with a clear wood preservative- there is no need to re-treat it unless you particularly want to -your frame is guaranteed against rot for 10 years, as long as you clean it once a year.

Where can I order my greenhouse

From your local Agent - to find your nearest, please enter your postcode into the website:

www.altongreenhouses.com

Please note that no greenhouse is 100% waterproof, and we do not recommend that non-greenhouse items such as soft furnishings are used in a greenhouse.

Summerhouse Range

·ALTON

SUMMER HOUSES

Western Red Cedar Cladding

All the cladding, windows, doors and external trims are made from 100% Western Red Cedar from Canada. This is the traditional timber used for garden buildings and greenhouses because it is very stable (I.e doesn't warp or twist) and extremely naturally resistant to rot. The colour of cedar varies naturally within the same tree between almost white through pinky orange colours, to a rich brown colour. All these natural colours are on display on your summerhouse, as we don't mask them by putting a horrible orange stain on.

Factory Treatment

We treat all these summerhouses with an oil based wood protector in our workshops. However the treatment is completely clear so that it doesn't ruin the natural appearance of the wood. You can, of course, treat your summerhouse if you want it to be a particular colour, but if you leave it to naturally mature, it will go an attractive silvery-grey colour which can look quite in place in your garden. You can re-treat with clear any time to increase the lifespan, but even if you don't treat it again your cedar should last for many years as long as you keep it clean. For the longest possible life, we recommend that you apply an oil based treatment every couple of years and clean it every year.

Full Sheet Glass as Standard

All of our summerhouses come with full sheet toughened safety glass as standard.

Top Quality Door & Window Furniture

All in a satin-chrome finish, the window catches, door hinges, bolts and door hooks are of a noticeably higher quality than the industry standard.

Felt Roof as Standard

Every summerhouse comes with black polyester mineral felt included. This will require replacing every few years if it is exposed to the weather.

Optional Georgian Windows & Doors

Made by skilled craftsmen, in our own workshops from Western red cedar and glazed with toughened safety glass.

Optional Cedar Slatted Roof

The optional cedar slatted roof not only makes your summerhouse more attractive, it also covers over the roofing felt and cedar trims at the bottom of the roof. This means that your felt will not be exposed to the elements and therefore will last for far longer. We highly recommend this option as worth the money in the long run.

Black felt roof (standard)

Locking Door

Whether single or double, your summerhouse door will be fitted with a proper 3 lever mortice lock, so you can safely lock your contents away.

Heavy Duty Thermowood Flooring

Thermowood heat treated. This means that they have been baked in an oven which changes the cell structure of the wood and kills nasties making it extremely stable and long lasting. Underneath are pressure treated bearers. You can of course, add your own flooring on top such as laminate if a better finish is required.

Redwood Framing

The internal framework of your summerhouse is made from redwood of various thickness including 69x44 for the roof joists. Roof joists are machined at both ends and fit together easily with the purposely designed galvanised steel boss, which adds strength and makes assembly far easier, because everything lines up so well.

Plywood Roof

The plywood roof gives a nice neat surface to the inside of the roof and creates less of a 'shed' feel than boards which are commonly used on other kinds of summerhouse. Made from natural hardwoods, the colour can vary, which creates a similar effect to the cedar wall cladding, with its warm and varying colours. Excludes the Fairford model.

Extra Wide Corner Caps

The roof trims and side corner trims are all shaped, cut to size and pre-drilled. This saves time, makes self-assembly easier and automatically creates a neater finish to the building. The extra wide side corner trims are profiled to fit the corner and the extra-wide width will cover most of the cladding nails that are near to the edge of the panel, so it makes for a far more attractive building. Many other summerhouses on the market provide a thin flat cap for the corners (you can understand why – the ones that we make can cost up to six times as much). A proper wide capping like this will last longer and look good for years.

Stainless Steel Fixings

All the nails in the cladding and all the externally used screws that we provide are stainless steel. This helps to prevent unsightly black stains dribbling from rusty nails that you see on most sheds after a year or two (particularly with cedar wood which is naturally acidic).

6x6 Alton Shipton

Specifications

- Western red cedar cladding
- Sturdy Redwood frame
- 21mm thick Thermowood floorboards with tanalised bearers
- Full sheet glazing (2 fixed, 2 opening)
- Toughened glass
- Single door with mortice lock
- · Satin chrome door & window furniture
- · Black poyester mineral felt as standard
- Factory applied oil-based treatment

Base preparation

We recommend that you prepare a nice firm level base for your new summerhouse. Level paving slabs would be ideal.

Assembly service

All Alton summerhouses are delivered in pre-assembled panels, for a straightforward self assembly. A lot of thought has gone into the design to enable it to be easily assembled on site. For example, the unique ridge bracket has a little lip that slots into the roof bars, to ensure that they can only be assembled in the correct way first time. All the doors and windows are glazed and fitted. You don't need joinery skills to assemble an Alton Summerhouse, all the difficult bits are done in the factory. If you would prefer to have your summerhouse professionally assembled, then your local dealer will be able to quote for that service.

How are they delivered?

Your summerhouse will be delivered in a palletised format, and is therefore officially a kerbside delivery. Please check the website for the latest lead times.

Treatment

Your summerhouse will be factory treated in a clear, oil based wood protector, which enables the natural cedar colours to show through beautifully when your building is new. In time, the wood will naturally weather to a silvery-grey colour, which is how many customers like to keep their summerhouse for a natural look. You can of course paint or stain your summerhouse as soon as you get it or after a year or so when it has weathered down.

Maintenance

All the external areas of wood on your summerhouse (except the floor which is tanalised redwood) are made from Western red Cedar. A timber famed for its natural resistance to rot. We recommend that you clean the summerhouse every year to avoid any build up of Algae, and re-apply a good oil-based treatment every two or three years. If you have a felt roof, this will need replacing every few years.

Guarantee

Your Alton Summerhouse comes with a 2 year structural frame guarantee. Moving parts have a 12 months guarantee. Exclusions include: glazing, wind damage, labour and accidental damage.
